Job Description

We are hiring a DevOps Engineer to improve deployment pipelines, cloud infrastructure reliability, and observability across our production systems.

Responsibilities

- Automate CI/CD pipelines for multiple engineering teams.
- Manage Kubernetes clusters and cloud infrastructure.
- Implement monitoring, logging, and alerting solutions.
- Improve system scalability, security, and uptime.

Requirements

- 4+ years of experience in DevOps or Site Reliability Engineering.
- Hands-on experience with AWS and Kubernetes.
- Familiarity with Terraform and infrastructure automation.
- Strong Linux and networking fundamentals.

Skills

- Kubernetes
- AWS
- Terraform
- Docker
- GitHub Actions
- Prometheus

Benefits

- Private medical coverage
- Paid certifications
- Annual company retreat
